

STATEMENT ON CLIMATE CHANGE

Addressing climate change, and the greenhouse gas (GHG) emissions that contribute to it, requires urgent action and long-term commitments by all members of society. Our dedication to reducing GHG emissions and addressing climate change that threatens human health supports and furthers our mission at Merit Medical to be the most customer-focused company in healthcare.

We acknowledge the scientific evidence presented by the Intergovernmental Panel on Climate Change (IPCC) concerning the need to limit global average temperature increase to avoid catastrophic effects of climate change. We also understand the risks and opportunities that climate change brings to Merit's global organization and assess these risks and opportunities within our Enterprise Risk Management (ERM) program. We recognize that using energy effectively and efficiently as well as investing in renewable energy can conserve natural resources and reduce fossil fuel combustion that contributes to GHG emissions and global warming.

We are committed to reducing the environmental footprint of our organization through increased efficiency, resource conservation, responsible procurement and logistics, and product innovation. As such, we have designated 2020 as a baseline year and have made the following commitments by the end of year 2030:

- 50% of our total energy usage will come from renewable sources
- Our energy intensity (kWh/\$ revenue) will decrease by 10% or more
- Our GHG emissions will decrease by 15% or more, indexed to revenue

In addition, we have set goals to decrease our water intensity by 10%, indexed to revenue. Through these actions we believe we will reduce GHGs from our operations, contribute to reducing our overall usage of natural resources, and mitigate environmental impacts in our business.
