and Breast Tumor Localization

2021: Emerging Frontiers

New SCOUT Applications, Products, Global Markets and Education

SCOUT Radar Localization is now available at over 885 hospitals and health systems across the globe and over 180,000 patients have benefitted from a wire-free localization. SCOUT continues to be the leader in wire-free technology across the globe and 2021 promises to bring expanded utilization, more global markets, new products and cutting edge, interactive educational programming.

Expanded Applications: SCOUT Localization of Soft Tissue

Exclusive Merit Café February 26 at 12pm EST

MERIT CAFÉ

While SCOUT has been utilized extensively in breast procedures, physicians are now recognizing the clinical benefits, including 1 mm accuracy, 60 mm depth and 360 detection are applicable across multiple soft tissue applications, in particular sarcoma, lung, and melanoma.

Three prominent surgical pioneers will lead a Merit Café on Friday, February 26th 12pm EST. to share how they are embracing SCOUT Radar Localization for soft tissue to include Sarcoma, Melanoma, and Lung. They will discuss current challenges with traditional localization techniques in these areas and how SCOUT resolves those challenges while sharing case examples and surgical techniques.

This Merit Café is ideal for those surgeons and interventional radiologists interested in a better way to localize soft tissue. Please plan to attend and share this invite with any of your colleagues who would also be interested.

New Product: A Game-Changing Technology Gets Its Own Space in the OR

Introducing the SCOUT Cart – Sleek and Functional Design with Safe and Secure Mobility

Merit Oncology prides itself on listening to customers and responding to their needs. After numerous observations concerning limited space in the OR for SCOUT console placement, we designed a solution. We are excited to now offer a state-of-the-art cart that has been built exclusively for the SCOUT system.

When placed on the base plate of the cart, the SCOUT console is held securely and is at the optimal height for better visualization of the localization readout.

The cart's console mobility allows for

the positioning preference of each surgeon to easily be accommodated during surgery.

Discover more about this new and innovative solution to optimal SCOUT console placement in the OR.

Important Information for Healthcare Administrators

Improving Breast Cancer Protocols with SCOUT Radar Localization

COVID-19 has had a dramatic impact on the focus and delivery of the Quadruple Aim in Healthcare: cost, patient experience, population health and HCP satisfaction.

Intermountain Healthcare, pre-COVID, implemented a novel

and highly collaborative approach in the management of their breast patients, which served to support the system's ability to optimize patient care while minimizing cost during this challenging era and beyond

Don't miss the upcoming webinar: ***The Intermountain Healthcare Experience:***

Improving Breast Cancer Protocols with SCOUT Radar

Localization, featuring Brett Parkinson, MD. This interactive discussion is for administrative and clinical stakeholders who seek to embrace disruptive innovation in pursuit of optimizing patient care and achieving the Quadruple Aim, in these challenging times.

Dr. Parkinson will discuss how the system reduced the number of patient encounters by over 50% with no compromise to quality care, in part through the utilization of placing SCOUT at time of biopsy for highly suspicious lesions. Join us on Thursday, February 18, 12pm EST.

Have Questions?

Do you want more information about SCOUT and how it was designed to make the day of breast cancer surgery easier for women and more efficient for healthcare providers? Send us a note.
